

# Artificial Intelligence

Is Artificial Intelligence good or bad?

## Pros

### A.I can make life easier

- A.I can detect irregular heartbeat saving lives.
- A.I can give you better a diagnosis.
- A.I can detect babies crying and soothe them.

### A.I creates for accessibility the disabled

- Virtual assistants such as Alexa can create shopping lists and browse the internet for people.
- Apps such as Wheelmap can show wheel chair accessibility.

### A.I can help improve workplace safety

- Can monitor emails for inappropriate and harassment.
- A.I can track Covid tests.
- A.I can become the new employees that never get sick.

50% of construction companies use drones to inspect roofs.

## Cons

### A.I can cause mass unemployment

- A.I caused 11,000 lose their jobs to automation in retail.
- Most businesses are choosing A.I over people.

### A.I amplifies racism

- Facial recognition has shown to only recognize white men.
- A.I never picks up racial slurs on the web.
- Tracks more people of color on police radars.

### A.I can remove internet safety

- Target tracks what you buy and will send you coupons for that.
- A.I can track you without your knowing.

35% of the time African American women couldn't be recognized by face recognition

## Concluding Argument

Though the pro side of the text shows many benefits we can't ignore the lack of privacy, racism A.I shows, and mass employment it causes.
