

# Internet

## Is the Internet making us stupid?

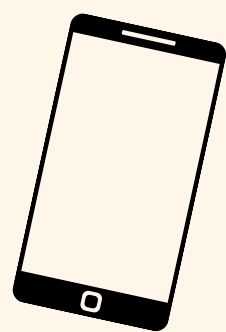

### Pros

#### The Internet is reprogramming our brains

- More than half of people on a survey agreed the internet caused their short attention span and ability to concentrate
- Almost 1/4 of people agreed it made them lose the ability to do simple tasks
- People lack intimate friendships and emotional connection. Apps substitute with bad hobbies

#### IQ scores have been falling for decades because of technology

- Drops 7 IQ points per generation
- Drops 10 points when distracted by multiple tabs and apps

### Cons

#### The Internet has been feared but they are nonsense

- Exhaust children's brains with excessive studying
  - Technology is untrustworthy
- Whats wrong with these statements?**  
They are not the evolution of social concerns but their similarity from one century to the next.

#### More equal access to information

- Stupidity relies on tests that are racist, sexist and classiest
- Most Americans do not have reliable access to the Internet

#### WHO IS THE US?

- 52.7% agree Internet caused short attention span
- 21.5% thinks they lost ability to do simple tasks

- 21-42 million Americans do not have reliable broadband access to the Internet (6%-13%)
- 162 million are not using the Internet at broadband speeds

I must agree with the cons because pro is not acknowledging con's argument while con is acknowledging and encouraging the reader to follow their opinion
