

Artificial Intelligence

Is artificial intelligence good for society?

Pros

AI can make our lives better and improve our health

- AI makes it possible for people to stay in shape at home.
- **AI can detect irregular heartbeats, heart attacks, and even congestive heart failure .**
- AI can result in more personalized care.

AI is able to help people with disabilities, and make their lives with technology easier

- Virtual assistants allow people who are hearing impaired access transcripts of voicemails or other audio.
- **Voice commands can allow better use to people dexterity disabilities who may have trouble with buttons or screens.**
- Some apps can read texts, or describe images for visually impaired people.

- **"Using AI, speakers can also detect regular and irregular heartbeats, as well as heart attacks and congestive heart failure."**

Cons

AI will cause harm to many people as robots start replacing humans

- AI robots don't need the benefits and care that human workers do.
- **Some experts believe that AI unemployment, and a breakdown of the social order.**
- AI is causing wage decreases for workers.

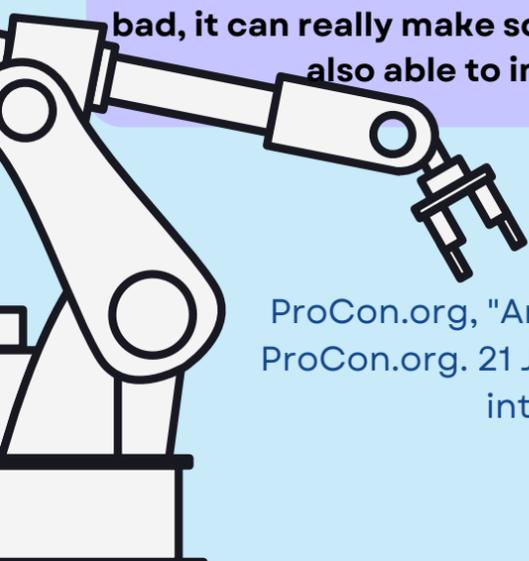

AI repeats human racism

- Facial recognition has been found to easily recognize the faces of white men, while wrongly identifying black women 35 percent of the time.
- **It has been found that there are more federal and local police surveillance in neighborhoods of color**
- AI constantly fails to recognize and censor racial slurs such as the N-word.

- **"Beyond facial recognition, online AI algorithms frequently fail to recognize and censor racial slurs, such as a recent incident in an Amazon product description for a black doll. AI is also incapable of distinguishing between when the N-word is being used as a slur and when it's being used culturally by a black person."**

So from what I have researched and learned about while doing this assignment, in my opinion, I believe that while AI can and might be used for both good and bad, it can really make somebody's life easier. And I also find it helpful that AI is also able to improve people's lives who have disabilities.
